

## STATUS OF NEW MARINE FAUNAL DISCOVERIES BY CMLRE

**FIGURE 1.** New Species published recently by CMLRE

India is one of the 17 mega-biodiversity nations on the planet with diverse marine ecosystems supporting more than 20,000 animal species. Comprehensive surveys of the seas in the Indian EEZ by the CMLRE-owned Fishery Oceanographic Research Vessel Sagar Sampada (FORVSS) during the 10th, 11th and 12th Five-year plans and the 14th Finance Commission Scheme (2017–2020) have resulted in moderately large faunal collections deposited in the FORV Referral Centre of the institute. The sampling surveys comprised dedicated cruises on-board the FORV Sagar Sampada in the Indian EEZ and Central

Indian Ocean, and by SCUBA diving as well as intertidal surveys in the Agatti Island, Lakshadweep. These efforts carried out by the CMLRE under the aegis of the MLRP from the 10th Five-year plan to till date have yielded peer-reviewed publications on 109 new faunal discoveries including 39 species new to science (Figure 1; Table 1) and 69 first zoo-geographical records from the Indian EEZ and 1 first zoo-geographical record from the Central Indian Ocean (Figure 2; Table 2).

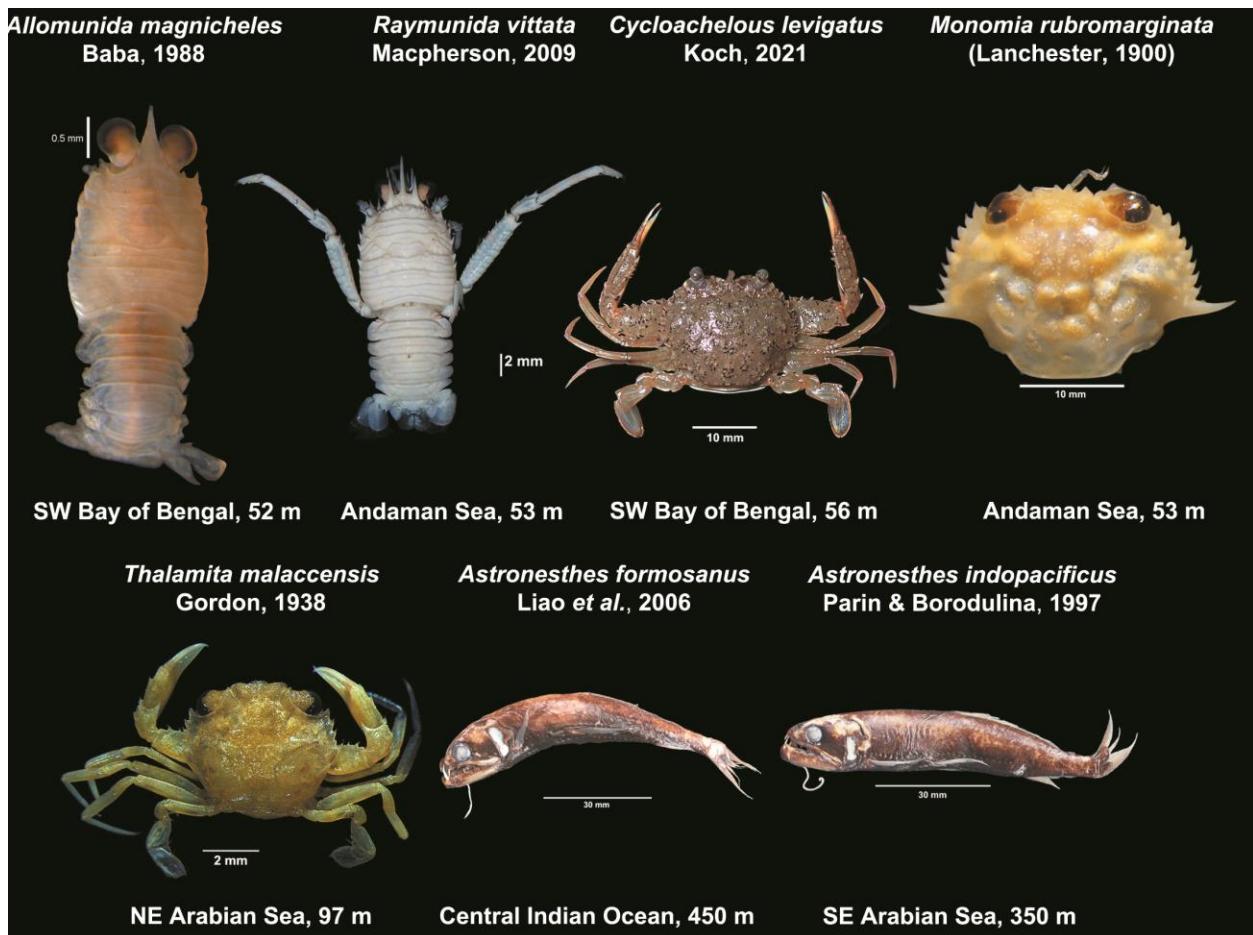

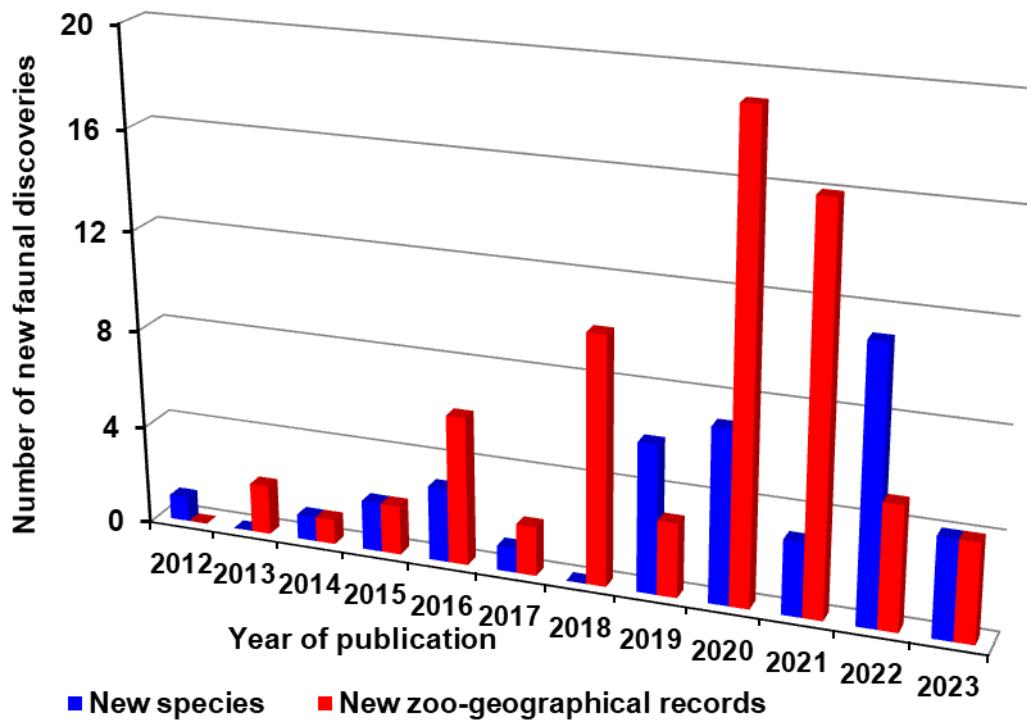

FIGURE 2. New zoo-geographical records of marine fauna published recently by CMLRE

Faunal discoveries by CMLRE began in earnest during the 10<sup>th</sup> Five-Year Plan with systematic surveys on board the FORVSS, and these findings were published in scientific peer-reviewed journals from 2012 onwards. A remarkable quantum of research effort by the Resource Exploration and Inventorization System scientific team was achieved during 2020–2022, resulting in the publication of 21 new species and 40 new zoo-geographical records (Figure 3). These discoveries accounted for 54% and 57% to the total number of new species and new zoo-geographical records published by CMLRE, respectively. Till date, new species and new zoo-geographical records have been published in 31 and 39 peer-review papers, respectively.

**Figure 3. Year-wise data of new species and new zoo-geographical records published by CMLRE**

Among the new faunal discoveries, a significantly high number represented deep-waters beyond the 200-m depth contour, which has enabled the CMLRE to emerge as the foremost contributor of information on the deep-water biodiversity of the Indian EEZ. These discoveries have created a greater potential for envisaging further biodiversity surveys in the deep-waters of the Indian EEZ, and also highlighting the significance of the Southeastern Arabian Sea (16 new species, 19 new zoo-geographical records) and Andaman Sea (15 new species, 39 new zoo-geographical records) as potential “marine biodiversity hotspots” (Figures 4 and 5).

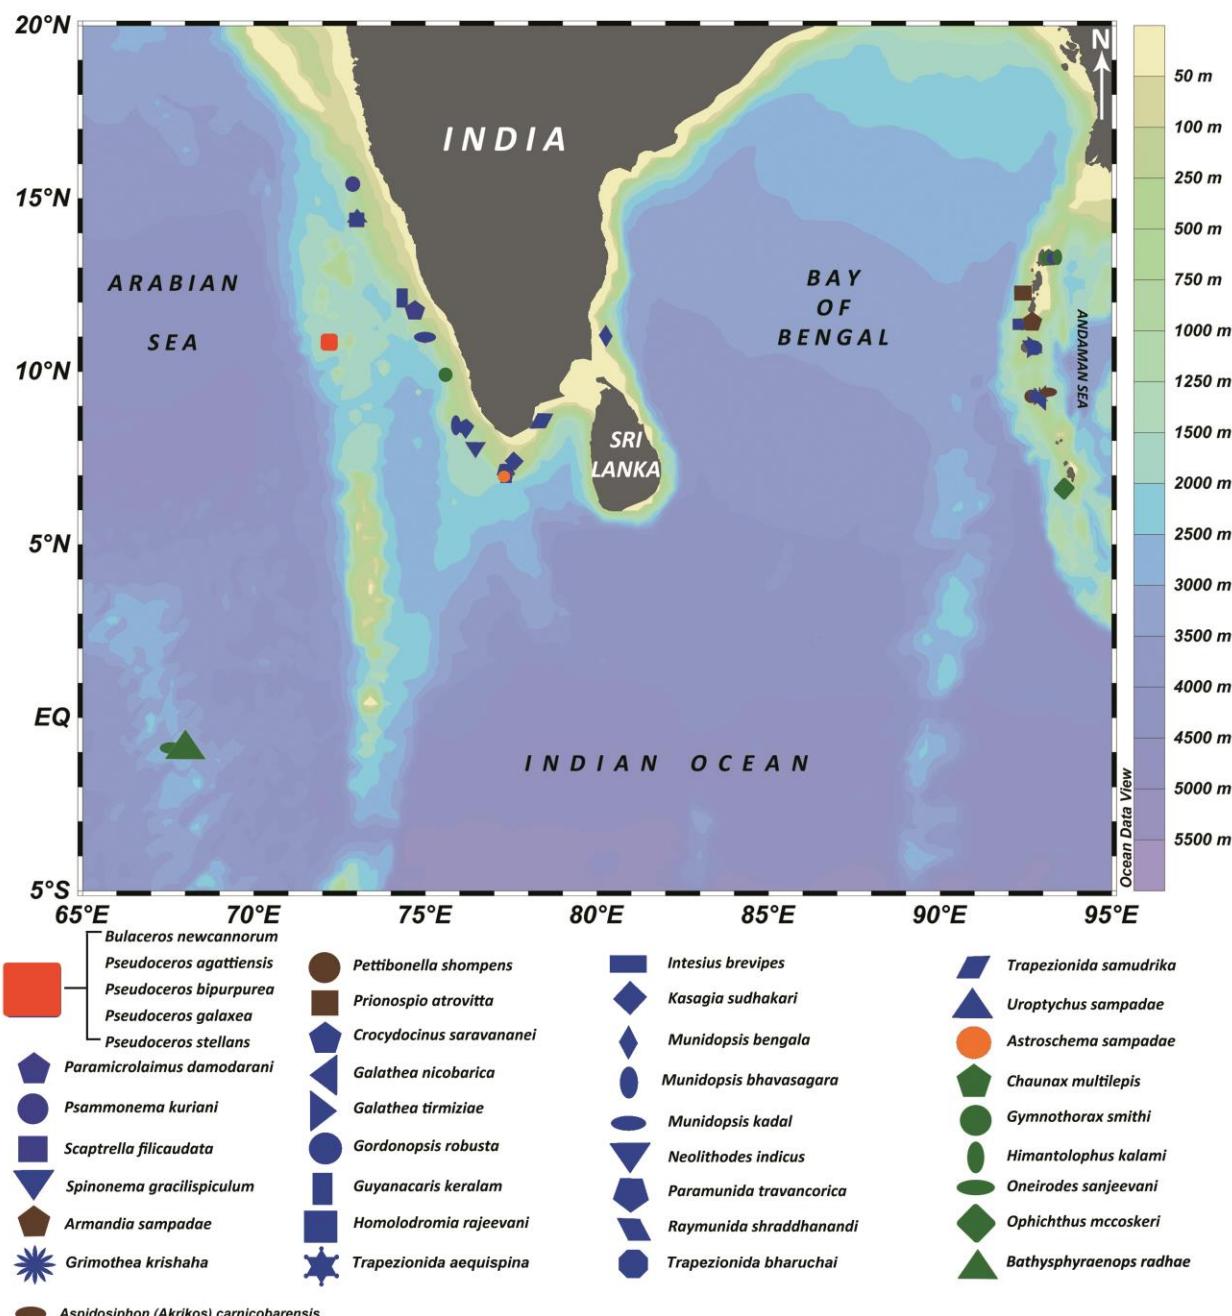

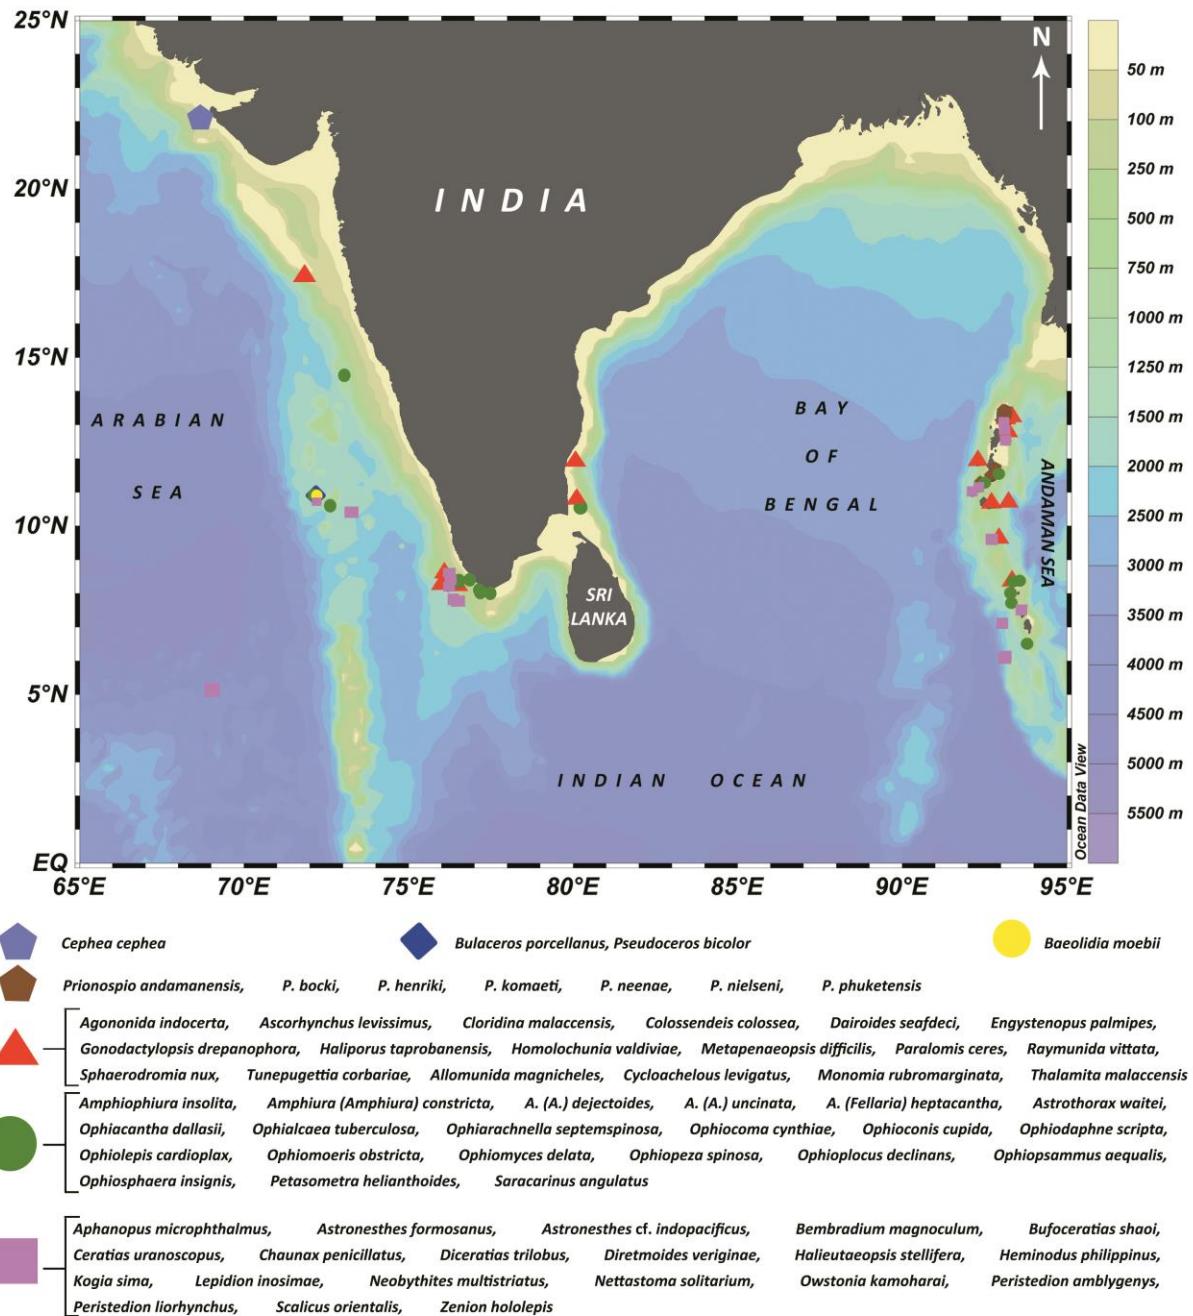

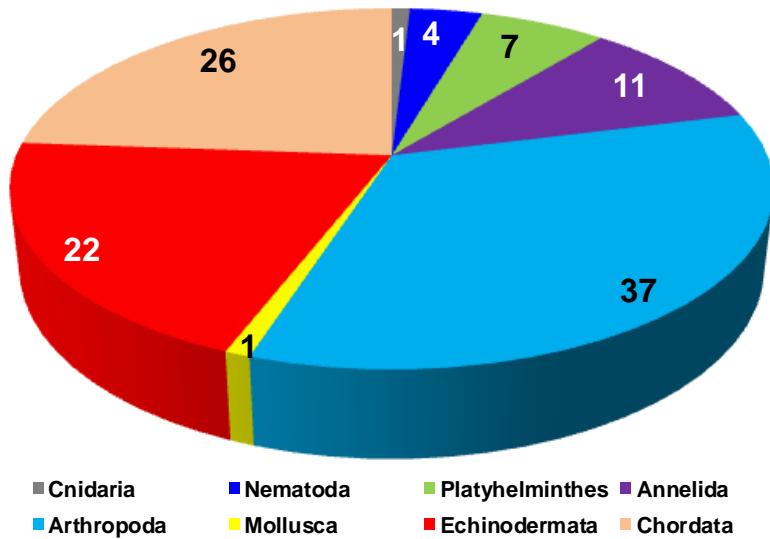

Figure 4. Type localities of 39 new species described by CMLRE

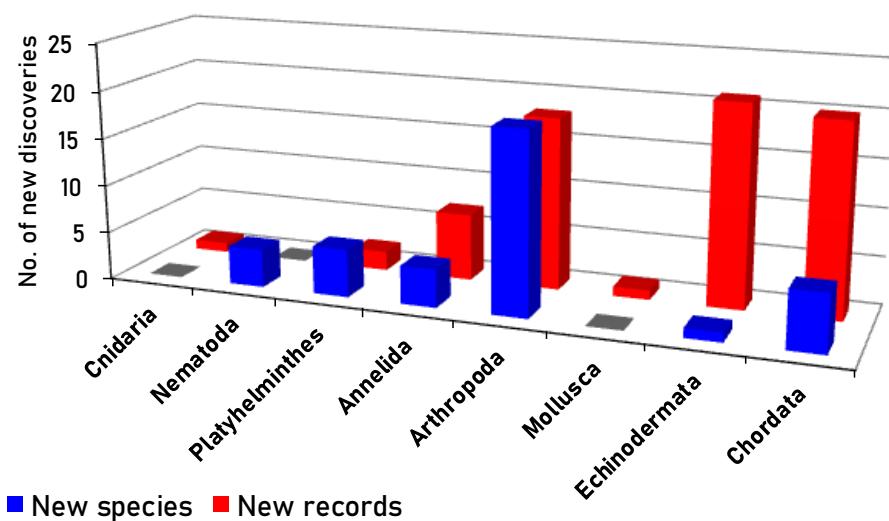

**Figure 5.** Sampling localities of 70 new zoo-geographical records published by CMLRE

The 109 new faunal discoveries (new species and new records) species published till date could be categorized into 8 animal phyla, of which the Phylum Arthropoda accounted for a significant 34%, followed by Chordata (24%) and Echinodermata (20%). The remaining 22% species belonged to Annelida, Platyhelminthes, Cnidaria, Mollusca and Nematoda (Figure 6).

**Figure 6. Phylum-wise contribution to the new marine faunal discoveries (new species and zoogeographical records combined).**

Phylum Arthropoda accounted for the highest number of new species (19) followed by Chordata (7) and Platyhelminthes (5) (Figure 6). On the other hand, Phylum Echinodermata contributed for the highest number of new zoogeographical records (21), followed by Chordata (20) and Arthropoda (18) (Figure 7).

**Figure 7. Phylum-wise numbers of new species and new records.**

**Table 1. List of new marine animal species discovered by CMLRE**

S. No.	Year of publication	Phylum	Name of new species with Authority	Depth (m)	Region
1	2012	Echinodermata	<i>Asteroschema sampadae</i> Parameswaran & Abdul Jaleel, 2012	454	SEAS
2	2014	Annelida	<i>Pettibonella shompens</i> Gopal, Useph, Varghese & Narayana, 2014	50	ANI
3	2015	Nematoda	<i>Paramicrolaimus damodarani</i> Jacob, Jaleel & Vijayan, 2015	95	SEAS
4	2015	Nematoda	<i>Scaptrella filicaudata</i> Jacob, Abdul-Jaleel, Philip & Damodaran, 2015	1100	SEAS
